MINKPOLICE

User Friendly

Using MinkPolice is intuitive
as checking your mail

Reliable

The MinkPolice server moni-
tors the device for you

Transparent

Review the communication log
for each monitor separately

MinkPolice monitors your traps for you!

You can save a lot of time and money by not driving out to check your traps every day. Instead, use MinkPolice trap monitor. It notifies you when your trap shuts.

MinkPolice works with your free online interface, where you can easily set up your monitor, check the current status of all traps, and enter all phone numbers and email addresses, you wish to be notified upon trap closure.

MinkPolice even sends you a message if there is a problem, such as network failure. And of course, it gives you a heads up before the batteries die.

ALERT HOUSE

D2K

Immediate Notifications

The user is informed immediately about the closing of the trap via email and/or text message.

Summarized status reports

If requested, the Server will send one or two emails and/or text-messages per day summarizing the status of all traps. Instead of receiving individual status reports from each and every trap, the MinkPolice status report summarizes the status of all traps in one single message.

Easy and intuitive set-up

Set-up and configuration is done intuitively with few clicks on the MinkPolice website and it is not necessary to call or send sms messages to the device in order to set it up. Once the monitor is registered online with its easily recognizable serial number printed on the side of the device, you can set up phone numbers, email addresses, times for daily status reports and more with just a few clicks.

Documented overview of all server communication

By clicking on a trap in the trap-overview, a trap's communication log can be accessed. It shows the battery status, the temperature, and the signal strength. Every time the monitor contacts the server, it is documented. If necessary, it is easy to provide proof that the monitor has been checked several times a day.

## Works even in areas with weak network coverage

Even in areas of weak mobile network coverage, MinkPolice still works without any trouble. The communication between device and server requires very small data packages, and in addition, we have invested a lot in optimizing the antenna reception. Therefore, the MinkPolice monitor still works even where phone calls and text messages fail.

Waterproof

MinkPolice is IP67 tested (waterproof down to one meter).

Batteries last up to one year

4 AA Lithium batteries will last approximately one year with two daily status messages.

Compatible with any kind of trap

The MinkPolice trap-monitor can be used with any type of trap where a mechanical movement is involved when the trap closes. This includes cage traps, kill traps, underground pipe traps, bird traps, and traps on rafts.

Useless if stolen

Because every trap-monitor is registered in the MinkPolice online-portal, it can only be used by the authorized user. In case of theft, it is not possible for another person to register the same monitor in his/her own profile.
